zeros t_n
(mpmath, step 1)
Wu-Sprung V, Eq. (2)
FD solver (steps 3-4)
fit δV on zeros
1, ..., n_{fit} (step 6)
smooth part
N_{sm}, s_n, gap_n
(step 2)
targets $\tilde{t}_n = t_n + \Delta_n$
(step 5)
plain eigensolve
of fitted V (step 7)
score held-out
zeros only:
rms, corr
vs null
oracle: solve $N_{\text{sm}} + N_{\text{fl}} = n - \frac{1}{2}$
(Eq. (4), step 8)
